

## Cobra and Box King busy at Kilafors Emballage, Sweden

Kilafors Emballage is a family owned company with approx.10 employees who has been converting corrugated for over twenty years.

Since the beginning of this year they are operating in spacious premises perfect for this type of activity.

Kilafors Emballage is today a well equipped sheet plant who has purchased all its new machinery from IMG-Klett.

Mr Hans Englund,  
general manager and  
owner comments on  
his choice of IMG-Klett  
as his main supplier;

*As a small family company it is vital to have a supplier with well suited machines and fast service - all to affordable prices.*

*We have to produce everything that our customers are asking for.*

*It must be produced "yesterday" and to lower costs than our competitors and still give us a handsome profit.*

*For us it is very important to have a good personal and friendly relation with the supplier and its representative.*

*We want to feel important for the supplier and to be treated as such.*

*This good relation we have had with IMG-Klett throughout the years and this is why we came back to them.*

Modern and large production floor

*My first machines from IMG-Klett were a 2.8 m printer slotter, a rotary slotter and a folder gluer.*

*Some years later we purchased another smaller printer slotter and at the same time we removed the old kicker-feeder and replaced it with a lead edge feeder.*

## Flat bed die cutter "Cobra"

Mr Englund explains:

"

*I saw the Cobra first time at the Corrugated exhibition in Paris and immediately was impressed over its noise- and effortless running. You could nearly not hear it cut. Now, 5 Months later our hopes have been realised but not our fears.*

*It was our first flat bed die cutter, but our operators learned quickly whatever needed and off they went producing.*

*The Cobra swallows whatever skewed sheets we have to live with and feed it with.*

Cobra 1200 x 1620 mm flat bed die cutter with stripping and bundle stacker

## The Box maker- "Box King"

- I also saw first time in Paris.

*You sometimes wish you could be alone on the market with such a versatile machine.*

*It has taken jobs from both the rotary slotter and my printer slotters.*

*It is of course not as fast on pure printer slotter jobs, but it is faster to set up and it makes the boxes ready in one go- with print.*

*My Box King is never out of work.*

*The automatic feeder takes away the heavy lifting associated with the large sheets for eg the furniture industry which is one important customer for me.*

Mr Englund concludes:

"

*Now we will be running with these machines for a while and then we'll see what we can surprise the market with in the future.*

*All customers and maybe one and another curious sheet supplier are welcome to see what we are doing."*
